Sycor.Rental

The Microsoft Dynamics AX solution for the rental industry

Microsoft
GOLD CERTIFIED
Partner

The ERP industry solution for rental, sales, service and maintenance of mobile goods.

With *Sycor.Rental*, our fully integrated ERP industry solution, you can rise to challenges like enormous competitive pressure, increasingly complex operations due to larger vehicle fleets and machinery outfits, and an ever-expanding range of services on the market. *Sycor.Rental* boosts and ensures your success over the long term.

Sycor.Rental combines the advantages and standard software features of Microsoft Dynamics AX with the industry expertise of Sycor. The result is an ideal industry solution for mobile goods rental, sales, service and maintenance. *Sycor.Rental* can be easily tailored to your company and adapted to your business specializations. Microsoft's "tested/verified" seal of approval testifies to the high quality and outstanding functionality of our solution.

Sycor's process and industry expertise means that our ERP solution maps and optimizes all

processes, from rental, sales and logistics right through to service and maintenance. Tools developed by Sycor depict processes graphically and provide complete access to all the data you need for an effective workflow with faster processing times. For example, the graphical dispatcher shows you the availability of devices and machines, including assigned employees as well as planned service intervals and dates. Clear color labeling allows for a quick overview of data. Dates can be easily moved or modified using the drag and drop function. A rollover function provides additional information on each line item in real-time.

The quick entry screen makes creating orders and quotes faster, more convenient and ultimately more cost-effective. It features an integrated filter function that makes it easier to find customers who have already been created in the system. You can also create new customers from the quick entry screen. An integrated shipping module helps you plan the best routes for delivery of rental goods and also lets you allocate and bill shipping costs on a source-related basis. >>>

- Intercompany business
- Tracking of item, serial and batch numbers

Service

- Service orders and agreements
- Assembly of accessories and equipment
- Planning and execution of maintenance work, repairs and cleaning
- Personnel planning

The Microsoft Dynamics AX platform can be easily integrated into existing IT landscapes and allows for global availability, scalability, configurability and optimal user-friendliness. Its clearly defined roadmap ensures maximum security of investment. The solution maps the typical business processes of small and medium-sized companies, from manufacturing and distribution, supply chain management, customer relationship management and project management right through to HR administration. It also features a fully integrated finance management module (for financial, asset and cost accounting) and a unique business analysis module.

Place your trust in business software that is easy to implement, flexible and tailored to your company.

As a full-service provider for Microsoft Dynamics AX environments and with a wealth of expertise from international projects, we also offer consulting, development and training services. Our comprehensive operating services (including multilingual support) make us the right technology partner for any Microsoft Dynamics AX project. We are DIN EN ISO 9001 certified, offer ITIL-compliant service processes, and always provide tailored, quality-assured solutions.
